

CHELSEA TOWER

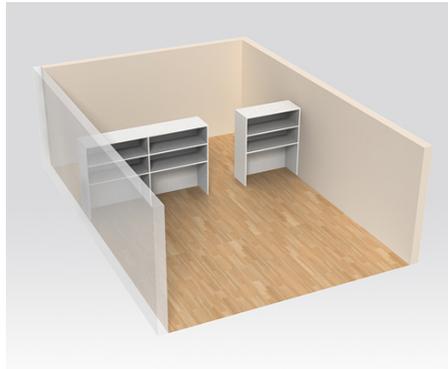

100 West 26 Street, New York, NY 10001

Wall requirements

1. **Walk about wall:** A type of code compliant divider, a free standing "**Walk About**" screen. Furniture that allows privacy without impacting the openness of the room. There are no doors permitted. You could use curtains or accordion type door.

2. **Bookcase divider:** The Bookcase Partition is a system designed to create an additional room using custom-sized bookcase units to divide a space. The Bookcase Partition can be modified according to the requirements of the room. For example, one shelving unit can face the first room while the other is turned so that it is of use in the second. The bottom portion is generally left without shelves so as not to take up floor space.

Individual shelving units are either 6-inches or 12-inches deep. 6-inches deep units are usually used when the purpose is really just to partition. 12-inches is used when the purpose is also for storage.

Usually the Bookcase Partition is 7 feet high and has a door. [Most buildings have 8' ceiling, so there'll be a foot clearance between the partition and the ceiling, for lighting and ventilation].

There are no doors permitted. You could use curtains or accordion type door.
